MDR FOR 24/7 TRIAGE, RISK ANALYSIS AND RESPONSE

Observian supports the integration, management, response, and optimization of all AWS native Cloud Security Services with certified security and engineering professionals. This package is uniquely designed to protect and monitor your essential AWS resources, delivered to you as a fully managed service.

Amazon EC2 for Windows Server

- AWS Infrastructure Vulnerability Scanning
- AWS Resource Inventory Visibility
- AWS Security Best Practices Monitoring
- AWS Compliance Monitoring
- 24/7 Incident Alerting and Response

- Monitor, Triage Security Events
- Distributed Denial of Service (DDoS) Mitigation
- Managed Intrusion Prevention System (IPS)
- Managed Detection and Response for AWS Endpoints
- Managed Web Application Firewall (WAF)

70% 70% of breaches were perpetrated by external actors, the majority being motivated by financial gain.

62% 62% of security threats to public clouds are attributed to AWS Cloud platform misconfigurations by customers.

65% Two in three (65%) respondants consider cloud security the most important skill for migrating or implementing cloud infrastructure.
aws

Managed Detection & Response

Observian leverages Fortinet's FortiCNP to deliver real-time threat protection with zero-permission security coverage to your AWS environments.

Data Security

Detects and protects against malware, sensitive data, data loss, and misconfigurations in cloud storage repositories.

Risk Management

FortiCNP's patented Resource Risk Insights (RRI) correlates and contextualizes security alerts and findings from AWS security services and Fortinet Security Fabric solutions to analyze cloud risk. RRI enables actionable insights with consistent workflows to help security teams to manage and remediate risk.

Compliance

Simplify compliance for regulatory requirements that include CIS benchmarks, as well as corporate and regulatory standards such as PCI, HIPAA, SOX, GDPR, ISO 27001, and NIST.

Threat Management

Native integrations with AWS security services such as Amazon GuardDuty Malware Protection and Amazon Inspector and Fortinet Security Fabric solutions deliver real-time threat protection with zero-permission security coverage.

Container Security

Protects against vulnerabilities in container images and registries throughout the application lifecycle. Integrations with Kubernetes environments continuously monitor risk posture and activity for new and evolving threats.

RAPID ONBOARDING

Observian leverages AWS native automation, authentication, and authorization concepts to allow for rapid onboarding, secure remote assistance, and automated deployment of security services all with minimal overhead.

- ✓ **Frictionless setup**
- ✓ **Scale to hundreds of accounts**
- ✓ **Be up and running within minutes**
